

PT Toba Pulp Lestari's Commitment to Improve Water Quality (BOD and COD)

PT Toba Pulp Lestari (TPL) has an annual commitment to Improve and/or maintain water quality. TPL has a target to achieve BOD and COD content below 50% as required by regulatory standards. In 2018 TPL has reached the target.

Since 2020, TPL maintained to keep the content of BOD and COD below 50%. TPL controls contamination of wastewater and improving water quality by:

- Handling spillage properly by equipping the supporting facilities with band wall and sump pit pump.
- High concentration sewer is not allowed into the system.
- Ensuring the effective and efficient functionality of all sum pit pumps function well to avoid any overflow.
- Landfill activity water is not allowed to flow into storm drain sewer.
- Management of clean water entering to sump pit.

This is in accordance with the environmental objectives and targets of TPL that were made and approved on March 25, 2020.
