

PT Toba Pulp Lestari's Commitment to Improve Water Quality (BOD and COD)

PT Toba Pulp Lestari (TPL) has a time-bound commitment to Improve Water Quality. TPL has a target every year to achieve BOD and COD content 50% below the required regulatory standards and in 2023 TPL has reached the target.

Every year TPL maintains the content of BOD and COD as the regulatory system. TPL Control contamination of wastewater and improve water quality by:

- All spillage from the tanks is handled properly by equipping the supporting facilities with a band wall and sump pit pump.
- Influent sewer in high concentration is not allowed to enter the system.
- All sum pit pumps function well to avoid any overflow that enters to the storm drain sewer.
- No water that is coming from landfill activities flows to storm drain sewer.
- Reduce clean water entering to sump pit of the black liquor system.
- Wastewater monitoring uses the latest technology to monitor the quality of wastewater with SPARING monitoring which is online 24 hours to the ministry

This is to the environmental objectives and targets of TPL that were made and approved on March 25, 2020.
